About John Grout, Ph.D.

- Berry College (GA)
 - Campbell School of Business
 - Professor, former Dean
- Ph.D. Management Science
 - Penn State University
- Shingo Prize, “The Human Side of Mistake-Proofing”

Mistake-Proofing/Poka-Yoke Webinar

January 17, 2024

by John Grout

Objectives

- Build awareness of mistake-proofing
- Introduce a concise presentation format: “pecha kucha”
20 x 0:20 = 6:40
- What is mistake-proofing?
 - Include lots of examples
- Why do people err?
- How can design eliminate errors?
- Next steps in implementation

Agenda

- Introduce Pecha Kucha
- Pecha Kucha 1: Introduce mistake-proofing
- Discuss examples & answer a few questions
- Pecha Kucha 2: Which errors does mistake-proofing work on and how do I get started?
- Answer more questions about errors and mistake-proofing

Pecha Kucha (ペチャクチャ)

- Pecha Kucha was devised in 2003 by architects Astrid Klein and Mark Dytham in Tokyo, as a way to attract people to *Super Deluxe*, their experimental event space.
- Pecha Kucha is a presentations having 20 slides, each shown for exactly 20 seconds. The total presentation time was 6:40 seconds, that's it.
- The format keeps presentations concise, fast-paced and (hopefully) entertaining.

ポカヨケ

Poka-Yoke

Get a new
toothbrush

Use a metric
wrench

Your syrup is hot

Take the elevator to X-ray
MRI is this way

Alcatraz kitchen: The convicts are
armed

Leave me alone while I get these meds

Beware the mag

Wear your scrubs

A top-down view of a white toilet bowl set against a light-colored tiled floor. A small fly is perched on the upper rim of the bowl. On the floor inside the bowl, there is a cluster of small, light-colored eggs.

Time's up!
Any questions?

Some common mistake-proofing devices:

- **Guide Pins**
- **Blinking lights and alarms**
- **Limit switches**
- **Proximity switches**
- **Counters**
- **Checklists**

Other examples

Another Pecha Kucha is about
to begin

Intent: Help visitors find their way

Execution: A little confusing

Skill, Rule and Knowledge-based actions

- Skill-based action: action by autopilot.
- Rule-based action: we've seen it before and recall a rule about what action is appropriate.
- Knowledge-based action: Truly novel circumstances require careful thought and deliberation about what to do.

Rule-based action

Knowledge-based action

1 minute

2 minutes

3 minutes

4 minutes

5 minutes

Errors in knowledge-based action?

Don't use mistake-proofing

Use human error prevention
strategies

Errors in rule-based action?

Mistake-proofing may work well

**Combine with human error
prevention strategies**

Errors in skill-based action?

Mistake-proofing is ideal

**Perhaps best human
error prevention
strategy for these
actions**

1. Understand the problem

Root Cause Analysis

- Root Cause: a cause that can be acted upon such that it meets our goals and objectives and is within our control
- Look for actions AND conditions

Fire

Ignition source

Combustible material

Oxygen

1. Understand the problem

Cause and effect are same thing

Effects	Caused by	Causes
1. Injury	→	Fall
2. Fall	→	Wet surface
3. Wet surface	→	Leaky valve
4. Leaky valve	→	Seal failure
5. Seal failure	→	Not maintained

A continuum of causes

1. Understand the problem

Cause and effect are same thing

- Toyota says ask why 5 times
- If it's a continuum, why not more?
- Keep going until your answer to why is:
 - I don't know
 - I don't care

Apollo Root Cause Analysis: A New Way of Thinking
by Dean L. Gano

2. Start brainstorming solutions

Your 1st idea

A subsequent
improved
idea

2. Start brainstorming solutions

Try-storming (w/full-sized cardboard mock-ups)

3. Learn quickly which ideas are mistakes

Boeing Moonshine Shop

- No Money Spent = Creativity at a New Level
- Scrounge for EVERYTHING! EVERYWHERE!
- Fast and Inexpensive is the ONLY way to Try-Storm
- A 50% solution actually implemented, beats all hell out of a 100% perfect plan, created by meetings
- Get out of Kansas! To think differently you have to see and try different things – LEAVE YOUR WORKSITE! *Frequently*

3. Learn quickly which ideas are mistakes

Day 1: Lots of mock-ups

Day 1.5: discard some ideas
consolidate others

Day 2: proof of concept

Day 5: Finished tool

Day 2.75: prototype

Mistake-Proofing: When and How

Knowledge-based action? 

Rule-based action? 

Skill-based action?" 

1. Find the root cause
2. Try-storm prevention strategies
3. Fail quickly and cheaply to find success

Time's up!

Any questions?

Design (& details) still matters

It's there...

**But can you
see it in
use?**

Your errors

- What were they?
- Were they skill-, rule-, or knowledge-based?
- Any thoughts about how to prevent them?
 - Make the error more obvious
 - Create a failure that makes the error more benign
 - Help people do things right by putting knowledge in the world

A proposal for action: Homework

- Do something meaningful
 - Eliminate an error by mistake-proofing
 - Create significant cost savings
- Do something you'll be proud of
- Do something cool
 - Brew some moonshine: do something with nothing

Thank you!
